

Lab: Explore a Simple Generative Tool

Estimated time needed: 30 minutes

Overview

Generative AI models have revolutionized how you interact with technology, enabling you to create new content, generate realistic images, and translate languages with remarkable accuracy. In this lab, you will gain hands-on experience with a simple generative AI tool, DataRobot, exploring its capabilities and applications.

Learning Objectives

- After completing this lab, you will be able to:
- Sign up in DataRobot
 - Add a data set to the use case
 - Work on model building

Task 1: Sign-up in DataRobot

Step 1: Click www.datarobot.com

Step 2: Fill in the required information under the "Start your trial today" section and create an account. Once completed the information select "Submit". It will redirect to the signup page.

Note: To access the DataRobot platform, you must sign up using a work email address. If you do not have a relevant work email, an alternative is to create a GitHub account using your Gmail address. Once registered, you can log in to DataRobot using your GitHub credentials.

For step-by-step guidance on creating a GitHub account, please refer to the following link:

[GitHub Account Setup Guide](#)

Step 3: A new window will open; select the relevant option for signing in.

Step 4: Confirm your email by clicking **Verify Email** in your inbox.

Step 5: Sign up and start your first experience of using the Generative AI tool. The dashboard will look like the image below. You may like to familiarize yourself with the application by clicking **Select a walkthrough**.

Task 2: Add a data set

Step 6: The dashboard will appear shortly, and your screen will look as shown below. Click **Workbench**.

Step 9: Click Create Use Case.

Step 10: Click Data assets and select Browse Data to include the data set in your use case.

Step 10: You can select an in-built sample data set HOSPITAL_READMISSION_DATA and select Add to Use Case.

Step 11: Once you select the data set, you can see a preview of it by clicking on the dataset. You can also view the data set's features, as shown below. Click Add to Use Case.

Step 12: After you add the data set to the use case, the workbench will appear as shown below. You can click the data set to see the feature insights.

Step 13: Explore the All Features menu to display specific features.

Task 3: Work on Data Modeling

Step 14: You will have options **Modelling** and **Start wrangling**. You can try data wrangling if you want to. For this lab, you will work on model building under **Data actions** and select **Modelling**. It will take a while to prepare a data set for modelling.

Step 15: Once done, you need to select the **Target** feature. Select **readmitted** as your target feature.

Step 16: The workbench screen will be displayed as shown below. Click **Next**.

Step 17: You can modify the model setting in **Additional Settings**; once done, click **Next** and then click **Start modelling**.

Step 18: Building models will take a while.

Step 19: once the modelling is complete, you can pick a model of your choice, and the DataRobot will show the **Model Overview**.

Step 20: You can explore various model overview components like **Blueprint**, **Feature Impact**, and so on.

Step 21: If you have test or unseen data, you can also make predictions by clicking **Make Predictions** under **Model actions**.

Step 22: You can also click **Generate compliance report** and **download compliance report** for your use case.

Conclusion

In this lab, you have signed up in DataRobot, added a data set in a use case, and worked on data modelling.
